Summary

Alice Hardinge and Steven Pearce surveyed logging coupes FO020B and SX019H on the 30th of April 2023. Stumps were measured at 1.3m above the midpoint of ground, and waypoints of stump location recorded. The stream breach also had a waypoint recorded and was photographed.

Trees over 2.5m DBH

Surveyors measured trees over 2.5DBH and recorded their location and measurements. We are submitting the data to assist with the compliance of Sustainable Timber Tasmania's internal policy to *retain trees of 2.5m DBH where operationally possible*. Trees over 2.5DBH should receive a protective buffer, and not be harvested.
